

Sea Catch Spring Safety Pin

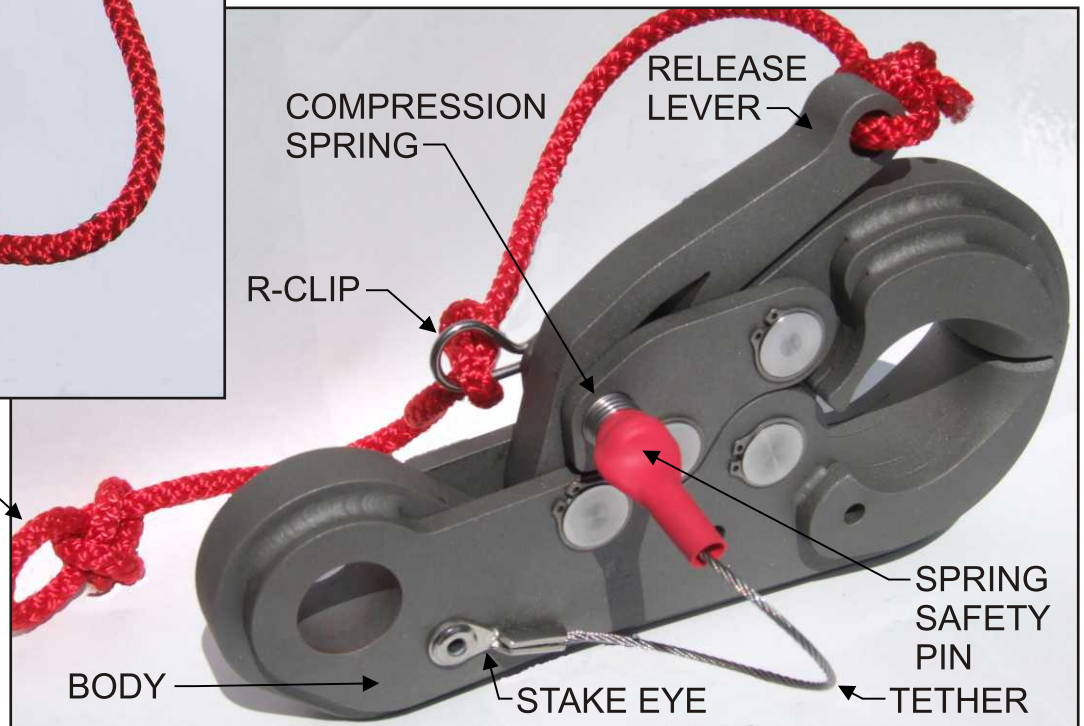

(Spring-loaded Safety Pin)

The purpose of the **Spring Safety Pin (SSP)** option is to allow the user to pull (eject) the Pin from a distance and do so using the Release Lanyard (when attached to Release Lanyard attachment loop).

The SSP option is available on all new Sea Catch Toggle Release hooks or as a retro-fit on customer-owned units. As shown, the pin is fitted with a compression spring that ejects the pin when the R-clip (tied to the lanyard) is pulled from the outer end of the pin. The pin is firmly tethered by wire cable to the body of the Sea Catch with a stake eye fitting (as shown) to prevent it being lost. Thus, the first pull on the release lanyard removes the R-clip (and the Safety Pin) and the second pull activates the release lever to release the load.

All metallic Spring Safety Pin components are stainless steel. Spring Safety Pins can be ordered directly from McMillan Design or through your dealer. Please specify the Spring Safety Pin (SSP) option with your order. The SSP option is comprised of Spring Safety Pin, R-clip, tether cable and end fitting, and a short red Release Lanyard attachment line.

TIPS: The Release Lanyard is never to be used as a tag line. Doing so may cause the R-clip to be pulled inadvertently and rendering this safety measure ineffective. Rigging the Spring Safety Pin as shown using the Release Lanyard rather than a separate line dedicated to the R-clip, prevents the Release Lever from binding the Spring Safety Pin and preventing its ejection. In addition, 2 lines (a separate tag line rigged to the lifting shackle and the Release Lanyard) are easier and safer to manipulate than 3.

SSP PRICES FOR:

TR3: \$42.00 TR7: \$52.00 TR10: \$58.00
 TR5: \$45.00 TR8: \$52.00 Larger units: Call for details.
